## 1.2.6 Binomial Coefficients

February 10, 2021

### **Definition**

$$\binom{n}{k} = \frac{n!}{k!(n-k)!} = \frac{n(n-1)...(n-k+1)}{k(k-1)...(1)}.$$

For example,

$$\binom{5}{3} = \frac{5 \cdot 4 \cdot 3}{3 \cdot 2 \cdot 1} = 10,$$

Note how

$$\frac{n!}{(n-k)!} = n(n-1)...(n-k+1)$$

For example, when n = 6 and k = 3,

$$6 \cdot 5 \cdot 4 = \frac{6 \cdot 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1}{3 \cdot 2 \cdot 1} = \frac{n!}{(n-k)!}$$

The quantity  $\binom{n}{k}$ , read "n choose k", is a binomial coefficient

# Operating on Binomial Coefficients

#### A. Representation by factorials.

$$\binom{n}{k} = \frac{n!}{k!(n-k)!}$$
, integer  $n \le \text{integer } k \ge 0$ 

### B. Symmetry condition.

$$\binom{n}{k} = \binom{n}{n-k}$$
, integer  $n \leq$  integer  $k$ .

- C. Moving in and out of parentheses.
- D. Addition formula.
- E. Summation formulas.
- F. The binomial theorem.
- G. Negating the upper index.
- H. Simplifying products.
- I. Sums of products.
